

How the CM20 monitor fits in the cell culture process

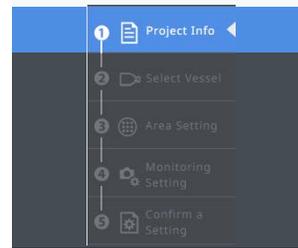

Compact design fits in standard-sized incubators; no special preparation is needed for installation

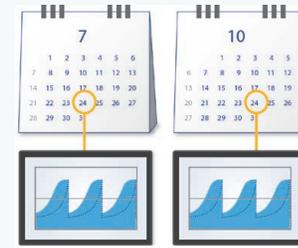

Smart system control provides a stable environmental temperature for cell cultures

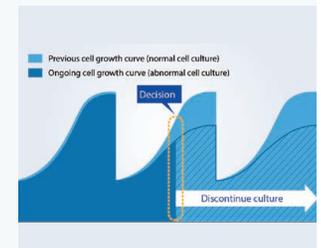

Sealed housing reduces the risk of contamination and makes regular maintenance easier

Start a project that automatically acquires and analyzes images in just 5 steps

Easily compare current and past results using quantitative data on cell counts and density

Use data to optimize cell culture conditions, such as media, serum, and containers
